

## Our Capabilities

### From Design to Implementation, We've Got You Covered.

No matter how small or complex your information exchange project may be, we've got what it takes to help you successfully implement your project and achieve desired results. That's why courts, justice, and public safety agencies across the country trust us to plan, manage, and facilitate their most critical information exchange projects.

Within the last decade, URL has implemented large-scale, multi-year justice integration projects at both the state and county level. Our success rests on our strong project planning and development approach coupled with our adoption of open, leading edge technologies; such as, Web services, service-oriented architecture (SOA), and its manifestation in the justice environment, the Global Reference Architecture (GRA).

We have been at the forefront of developing national standards to advocate and practice the sharing of information across agencies, including partnering to develop the emerging National Information Exchange Model (NIEM) standard. Our work on civil electronic filing is based on these standards, as well as the Electronic Court Filing (ECF) Version 4.0 standards.

All of this experience and commitment to standards translates into a consulting company with the proven subject matter expertise and technical knowledge to carry out even the most complex information exchange projects. The benefit to our clients is that our full range of system integration capabilities is augmented with real-world experiences, proven methodologies, standards, and best practices that are demonstrated in the breadth, depth, and pragmatic assessments that make up our strategic planning and implementation efforts.

URL's full-range of capabilities include:

- Strategic Planning and Governance
- Business, Exchange, and Technical Analysis
- Exchange Architecture
- Integration
- Project Management
- National and Industry Standards
